

Can Accel be used to clean dishes and litter boxes?

Rescue (formerly branded as Accel) is a cost effective product that when used properly and at the correct concentration will safely and effectively clean dishes and litterboxes.

Question:

We had already been using Rescue (formerly branded as Accel) for cleaning. In our kennel and ISO areas we were alternating days between Rescue/Accel and bleach. Your recommendation is to put all the bleach in the laundry room and not use in animal spaces. I am ready to make that leap – but I am wondering how we disinfect our dishes and litterboxes.

Currently, we fill a large tub with bleach and water (1:32). Dishes and litterboxes are washed and soaked in the tub for 15 minutes and then washed again, rinsed and dried.

Should we now use Rescue/Accel and water in the tub to soak the dishes and litterboxes? At a 1:64 dilution?

Thanks for your help!!

Answer:

I would absolutely use Rescue/Accel in your tubs for soaking litter boxes and dishes. You can use 2oz/gal (1:64) and soak for at least 10 minutes. There is no need to rinse after taking the items out of the tub; simply allow them to dry. Also, you can save money by mixing the Rescue/Accel and water in the tub with a lid and reusing the solution since the litter boxes and dishes have been washed before going into the tub. You only need to mix a new batch of Rescue/Accel and water once a week instead of daily.

Please let me know if you have any further questions – and I'm excited that you're ready to take the leap!

Best, Cindy
